To excise the insert, restriction sites upstream EcoRI should be used (e.g. BamHI, SalI, PstI). NOTE: Also due to the cloning system used Blue/white selection for recombinate is not 100% reliable."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /tissue_type="male inflorescences"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /clone_libe_iHM*
/note="Vector: pBluescript SK+; Site_1: EcoRI (5'-end of cDNA); Bite_2: XhoI (3'-end of cDNA); Due to a cloning artefact caused by the kit, in most cases the EcoRI site is NOT present, as well as the EcoRIadapter used for cloning. To excise the insert, restriction sites upstream EcoRI should be used (e.g. BamHI, SalI,PstI). NOTE: Also due to the cloning system used Blue/white selection for recombinate is not 100% reliable."

Biochemistry 28:8665-8670(1989).
-!- SUBCELLULAR LOCATION: Secreted.
-!- ALLENGEN: Causes an allergic reaction in human. Causes pollen allergy. Binds to igE.
-!- SIMILARITY: Belongs to the expansin family.
-!- SIMILARITY: Contains 1 expansin-like CBD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 97;

Immunol. 33:797-806(1996).

-- SUBCELLULAR LOCATION: Secreted.
-- ALLERGEN: Causes an allergic reaction in human. Causes grass pollen allergy. Binds to IgE.
-- SIMILARITY: Belongs to the expansin family.
-- SIMILARITY: Contains 1 expansin-like CBD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

expressed.

The present invention describes an isolated nucleic acid molecule (I) comprising a polynucleotide or its conservatively modified variant having a sequence of 291 bp (SEQ ID NO:1 (S1), ADJG5065). Also described: (I) a recombinant expression cassette (II) comprising (I; (2) a vector (III) comprising (II); (3) a host cell comprising (III); (4) a group 2/3 allergen encoding a polypeptide comprising (III); (4) a group 2/3 allergen encoding a polypeptide comprising any of the 12 sequences of 90-100 anno acids given in SEQ ID NO:2, or SEQ ID NO:3 to 18 ADJG506, or ADJG5082); (5) an isolated polypeptide (IV) encoded by (1); (6) an antibody that selectively binds to (IV); (7) a method of modifying cell walls in the tissues of a transgenic plant, comprising introducing

into a plant an expression cassette comprising a promoter active in cells of plants operably linked to a group 2/3 allergen polynucleotide which specifically hybridises to Sl under stringent conditions; (8) a method of weakening the mechanical strength of cellulose fibres; (9) a method for producing a polypeptide having expansin activity; (10) a transgenic plant cell comprising a nucleic acid that comprises Sl; (11) a transgenic plant comparises of the activity; (10) a transgenic plant compression cassette operably linked to a group 2/3 allergen expansin activity, or a transgenic plant comprises Sl and that conditions; and (12) seeds of the plant described above, which carry the polymucleotide which specifically hybridises to Sl under stringent conditions; and (12) seeds of the plant described above, which carry the DNA construct in their genome. (1) has plant growth regulant activity, and can be used in gene therapy. The composition and methods of the present invention can be used in altering plant cell wall properties, which may effect growth, flexibility and mechanical strength in tissues in which they are expressed. The present sequence represents a ryegrass of the plant activity is the composition of the exemplification conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method of desensitizing a patient to a polypeptide allergen and comprises administering to the patient a peptide derived from the allergen where restriction to a MFC Class II molecule possessed by the patient can be demonstrated for the peptide and the peptide is able to induce a late phase response in an individual who
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The invention relates to a novel method for desensitising an individual to a selected polypeptide antigen. The method comprises administering a composition that contains polypeptide antigens in an amount that generates in the individual a state of hyporesponsiveness to the antigen to allow desensitisation to one or more polypeptide antigens. The method of the invention has immunomodulator activity, and may have a use in gene therapy. The composition and method are useful in manufacturing a medicament for desensitising an individual to a selected polypeptide antigen to allow desensitisation to one or more polypeptide to the antigen to allow desensitisation to one or more polypeptide antigens. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Desensitizing an individual to a selected polypeptide antigen comprises administering a composition containing polypeptide antigens in an amount that generates a state of hyporesponsiveness to the antigen to allow
possesses the MHC Class II molecule. The methods can be used for desensitising patients to allergens present in e.g. grass, tree and weed (including ragweed) pollens, fungi and moulds, foods, stinging insects, the chiromidae (inn-biting midges), spiders and mites, housefly, fruit fly, sheep blow fly, screw worm fly, grain weevil, slikworm, honeybee, non-biting midge larvae, bee moth larvae, mealworm, cockroach, larvae of Tenibrio molitor beetle, mammals such as cat, dog, horse, cow, pig, sheep, rabbit, rat, guinnea pig, mice or gerbil. They can also be used to produce immunological vaccines which may be used to prevent and/or treat conditions involving hypersensitivity to allergens. This sequence represents the Lolium sp. allergen 126385 Lol p 2a

comprising a polynucleotide or its conservatively modified variant having

a sequence of 291 bp (SEQ ID NO: (S1), AD056051. Also described: (I) a

recombinant expression cassette (II) comprising (II); (2) a vector (III)

comprising (II); (3) a host cell comprising (III); (4) a group 2/3

allergen encoding a polypeptide comprising (III); (4) a group 2/3

comprising (II); (3) a host cell comprising (III); (4) a group 2/3

comprising (III); (4) a host cell comprising (III); (4) a group 2/3

comprising (III); (5) a host cell comprising (III); (4) a group 2/3

comprising (III); (5) a host cell comprising (III); (4) a method of modifying cell walls in the tissues of a transgenic plant, comprising introducing into a plant an expression cassette comprising a promoter active in cells of plants operably linked to a group 2/3 allergen polymucleotide which specifically hybridises to SI under stringent conditions; (8) a method of cell comprising a nucleic acid that comprises (9) a method for producing a polypeptide having expansin activity; (10) a transgenic plant comprising an uncleic acid that comprises SI; (II) a transgenic plant cell possesses expansin activity, or a transgenic plant comprising an coleic acid that comprises SI; (II) a transgenic plant comprising an uncleic acid that comprises SI; (II) a transgenic plant comprises and (12) seeds of the plant described above, which carry the conditions; and (12) seeds of the plant described above, which carry the conditions; and (12) seeds of the plant described above, which carry the conditions; and can be used in gene therapy. The composition and methods of the present invention can be used in allering plant cell wall properties, which may effect growth, flexibility and mechanical strength in tissues

Also described: (1) a cecombrising a polynucleotide or its conservatively modified variant having a sequence of 291 bp (SEQ ID NO:1 (S1), ADJ65065). Also described: (1) a comprising (1); (2) a vector (III) comprising (II); (3) a host cell comprising (III); (4) a group 2/3 allergen encoding a polypeptide comprising any of the 12 sequences of 90-100 amino acids given in SEQ ID NO:2, or SEQ ID NO:8 to 18 (ADJ65066, or ADJ65072 to ADJ65082); (5) an isolated polypeptide (IV) a method of modifying (6) an antibody that selectively binds to (IV); (7) a method of modifying cell walls in the tissues of a transgenic plant, comprising introducing into a plant an expression cassette comprising a promoter active in cells of plants operably linked to a group 2/3 allergen polynucleotide which specifically hybridises to S1 under stringent conditions; (8) a method for producing a polypeptide having expansin activity; (10) a transgenic plant cell comprising a nucleic acid that comprises S1 and that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid molecules encoding polypeptides having expansin activity, useful for altering plant cell wall properties to effect growth, flexibility and mechanical strength in tissues in which they are
in which they are expressed. The present sequence represents the ryegrass tol p 3 allergen, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              allergen; plant; expansin; transgenic plant; plant growth regulant; gene therapy; cell wall; growth; flexibility; tissue mechanical strength; ryegrass; Lol p 3; modified; variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated nucleic acid molecule (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              possesses expansin activity, or a transgenic plant comprising an expression cassette operably linked to a group 2/3 allergen polynucleotide which specifically hybridises to 51 under stringent

The present invention describes an isolated nucleic acid molecule (I)

comprising a polynucleotide or its conservatively modified variant having

comprising a polynucleotide or its conservatively modified variant having

a sequence of 291 bp (SEQ ID NO:1 (S1), ADJ65065). Also described: (I) a

recombinant expression cassette (II) comprising (II;); (2) a vector (III)

comprising (III); (3) a host cell comprising (III); (4) a group 2/3

allergen encoding a polypeptide comprising any of the 12 sequences of 90-

coll and into acide given in SEQ ID NO:2, or SEQ ID NO:8 to 18 (ADJ6506, or

ADJ65072 to ADJ65082); (5) an isolated polypeptide (IV) encoded by (I);

(6) an antibody that selectively binds to (IV); (7) a method of modifying

coll walls in the tissues of a transgenic plant, comprising introducing

into a plant an expression cassette comprising a promoter active in cells

cof plants operably linked to a group 2/3 allergen polynucleotide which

specifically hybridises to S1 under stringent conditions; (8) a method of

producing a polypeptide having expansin activity; (10) a transgenic plant

cell comprising a nucleic acid that comprises S1; (11) a transgenic plant

with a genome comprising a nucleic acid that comprises S1 and that
                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid molecules encoding polypeptides having expansin activity, useful for altering plant cell wall properties to effect growth, flexibility and mechanical strength in tissues in which they are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        allergen; plant; expansin; transgenic plant; plant growth regulant; gene therapy; cell wall; growth; flexibility; tissue mechanical strength.
conditions; and (12) seeds of the plant described above, which carry the DNA construct in their genome. (I) has plant growth regulant activity, and can be used in gene therapy. The composition and methods of the present invention can be used in altering plant cell wall properties, which may effect growth, flexibility and mechanical strength in tissues in which they are expressed. The present sequence represents a modified variant ryegrass Lol p 3 allergen protein sequence, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                  Gaps

The present invention describes an isolated nucleic acid molecule (I)

comprising a polynuclectide or its conservatively modified variant having

a sequence of 291 bp (SEQ ID NO:1 (S1), AD455065). Also described: (I) a

recombinant expression cassette (II) comprising (I); (2) a vector (III)

comprising (II); (3) a host cell comprising (III); (4) a group 2/3

allergen encoding a polypeptide comprising wo of the 12 sequences of 90-

100 amino acids given in SEQ ID NO:2, or SEQ ID NO:8 to 18 (AD455066, or

AD455072 to AD455082); (5) an isolated polypeptide (IV) encoded by (I);

confined an antibody that selectively binds to (IV); (7) a method of modifying

cell walls in the tissues of a transgenic plant, comprising introducing

into a plant an expression cassette comprising a promoter active in cells

cinc a plant an expression cassette comprising a promoter active in cells

cinc a plant an expression cassette comprising a promoter active in cells

cof plants operably linked to a group 2/3 allergen polynucleotide which

specifically hybridises to SI under stringent conditions; (8) a method of

weakening the mechanical strength of cellulose fibres; (9) a method for

producing a polypeptide having expansin activity; (10) a transgenic plant
                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid molecules encoding polypeptides having expansin activity, useful for altering plant cell wall properties to effect growth, flexibility and mechanical strength in tissues in which they are
possesses expansin activity, or a transgenic plant comprising an expression cassette operably linked to a group 2/3 allergen polymucleotide which specifically hybridises to SI under stringent conditions, and (1) seeds of the plant described above, which carry the DNA construct in their genome. (I) has plant growth regulant activity, and can be used in gene therapy. The composition and methods of the present invention can be used in altering plant cell wall properties, which may effect growth, flexibility and mechanical strength in tissues in which they are expressed. The present sequence represents an allergen, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           allergen; plant; expansin; transgenic plant; plant growth regulant; gene therapy; cell wall; growth; flexibility; tissue mechanical strength.

with a genome comprising a nucleic acid that comprises S1, (11) a transgenic plant with a genome comprising a nucleic acid that comprises S1 and that possesses expansin acitivity, or a transgenic plant comprising an expression cassette operably linked to a group 2/3 allergen polynucleotide which specifically hybridises to S1 under stringent polynucleotide which specifically hybridises to S1 under stringent polynucleotide which specifically hybridises to S1 under stringent bNA construct in their genome. (I) has plant growth regulant activity, and can be used in gene therapy. The composition and methods of the present invention can be used in altering plant cell wall properties, which may effect growth, flexibility and mechanical strength in tissues in which they are expressed. The present sequence represents an allergen, which is used in the exemplification of the present invention. Sequence 98 AA; 8888888888888888888

New isolated nucleic acid molecules encoding polypeptides having expansin activity, useful for altering plant cell wall properties to effect growth, flexibility and mechanical strength in tissues in which they are

Claim 6; SEQ ID NO 18; 73pp; English.

The present invention describes an isolated nucleic acid molecule (I) comprising a polynucleotide or its conservatively modified variant having a sequence of 291 bp (SBQ ID NO:1 (S1), ADU65065). Also described: (1) a recombinant expression cassette (II) comprising (II); (2) a vector (III) comprising (III); (4) a group 2/3 allergen encoding a polypeptide comprising (III); (4) a group 2/3 allergen encoding a polypeptide comprising any of the 12 sequences of 90-100 amino acids given in SEQ ID NO:2, or SEQ ID NO:8 to 18 (ADJ65066, or ADJ65082); (5) an isolated polypeptide (IV) encoded by (I); (6) an antibody that selectively binds to (IV); (7) a method of modifying cell walls in the tissues of a transgenic plant, comprising introducing into a plant an expression cassette comprising a promoter active in cells of plants operably linked to a group 2/3 allergen polynucleotide which specifically hybridises to S1 under stringent conditions; (8) a method of

weakening the mechanical strength of cellulose fibres; (9) a method for producting a polypeptide having expansin activity; (10) a transgenic plant cell comprising a nucleic acid that comprises S1; (11) a transgenic plant with a genome comprising a nucleic acid that comprises S1 and that possesses expansin activity, or a transgenic plant comprising an expression cassette operably linked to a group 2/3 allergan an expression casette operably linked to a group 2/3 allergan polynucleotide which specifically hybridises to S1 under stringent conditions; and (12) seeds of the plant described above, which carry the DNA construct in their genome. (17) has plant growth regulant activity, and can be used in gene therapy. The composition and methods of the present invention can be used in altering plant cell wall properties, which may effect growth, [lexibility and mechanical strength in tissues in which they are expressed. The present sequence represents an allergen, which is used in the exemplification of the present invention.

Desensitizing patients to polypeptide allergens.

Example 6; Page 55; 117pp; English.

This invention describes a novel method of desensitizing a patient to a polypeptide allergen and comprises administering to the patient a peptide derived from the allergen where restriction to a MRC Class II molecule possessed by the patient can be demonstrated for the peptide and the peptide is able to induce a late phase response in an individual who

~

The invention relates to a novel method for desensitising an individual to a selected polypeptide antigen. The method comprises administering a composition that contains polypeptide antigens in an amount that generates in the individual a state of hyporesponsiveness to the antigen to allow desensitisation to one or more polypeptide antigens. The method of the invention has immunomodulator activity, and may have a use in gene therapy. The composition and method are useful in manufacturing a medicament for desensitising an individual to a selected polypeptide to the antigen to allow desensitisation to one or more polypeptide antigens. The present sequence is used in the exemplification of the Disclosure; Page 25; 57pp; English invention

The present invention describes an isolated nucleic acid molecule (I)

comprising a polynucleotide or its conservatively modified variant having

comprising a polynucleotide or its conservatively modified variant having

combinant expression cassette (II) comprising (II); (2) a vector (II)

comprising (II); (3) a host cell comprising (III); (4) a group 2/3

allergen encoding a polypeptide comprising any of the 12 sequences of 90-

comprising (III); (5) an isolated polypeptide (IV) encoded by (IV);

ADUSSO72 to ADUSSO82); (5) an isolated polypeptide (IV) encoded by (IV);

coll walls in the tissues of a transgent polynucleotide which

coll walls in the tissues of a transgent polynucleotide which

coll walls in the tissues of a transgent polynucleotide which

coll plant an expression cassette comprising a promoter active in cells

coll plant an expression cassette comprising a promoter active in cells

coll comprising the mechanical strength of cellulose fibres; (9) a method of

weakening the mechanical strength of cellulose fibres; (9) a method of

coll comprising a nucleic acid that comprises S1 and that

cell comprising a nucleic acid that comprises S1 and that

cell comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprising a nucleic acid that comprises S1 and that

coll comprises S1 and (12) seeds of the plant described above, which carriage the plant properties,

conditions; and (12) seeds of the plant coll are solved

                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated nucleic acid molecule (I) comprising a polynucleotide or its conservatively modified variant having comprising a polynucleotide or its conservatively modified variant having a sequence of 291 bp (SEQ ID No:1 (S1), ADJ65065). Also described: (I) a recombinant expression cassette (II) comprising (I); (2) a vector (III) comprising (II); (3) a host cell comprising (III); (4) a group 2/3 allergen encoding a polypeptide comprising any of the 12 sequences of 90-100 amino acids given in SEQ ID No:2, or SEQ ID No:8 to 18 (ADJ65066, or ADJ65082); (5) an isolated polypeptide (IV) encoded by (I); (6) an antibody that selectively binds to (IV); (7) a method of modifying cell walls in the tissues of a transgenic plant, comprising introducing into a plant an expression cassette comprising a promoter active in cells of plants operably linked to a group 2/3 allergen polynucleotide which ceptically hybridises to S1 under stringent conditions; (8) a method for producing a polypeptide having expansin activity; (10) a transgenic plant cells approached plant and that comprises S1 (II) a transgenic plant cells comprising a nucleic acid that comprises S1 (II) a transgenic plant cells comprising and (I2) seeds of the plant described above, which carry the possesses expansin activity, or a transgenic plant comprising and (I2) seeds of the plant described above, which carry the conditions; and (I2) seeds of the plant described above, which carry the conditions; and (I2) seeds of the plant described above, which carry the conditions; and in gene therapy. The composition and methods of the plant encan be used in gene therapy. The composition and methods of the present invention can be used in allering plant cell wall properties, which may effect growth, flexibility and mechanical strength in tissues
                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid molecules encoding polypeptides having expansin activity, useful for altering plant cell wall properties to effect growth, flexibility and mechanical strength in tissues in which they are
                                                                                                                                                                                                                                                                                                                                                                                                                                               allergen; plant; expansin; transgenic plant; plant growth regulant; gene therapy; cell wall; growth; flexibility; tissue mechanical strength.

```
The invention describes a malignant malarial parasite dynein gene. The gene encodes the endogenous GTP enzyme of trihary GTP conjugated structure domain specifically expressed in schizont cyclein erythrolcytic phase of malignant malarial parasite. The polypeptide produced by the amino end polypeptide segment of the gene can inhibit the growth of two strains of malignant malarial parasite in erythrolcytic phase outside body, and may be used as the candidate target antigen of immunological treatment of malignant malarial parasites. The present invention makes it possible to increase the knowledge about life characteristic of malignant malarial parasite. This sequence encodes malignant malarial parasite
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä
